Agricultural Business, Leadership, and Education
https://cwi.edu/program/agriculture-business-leadership-and-education

Agriculture is a major industry in Idaho and the United States. If you are looking to broaden your horizon within the field and bring a unique skill set to the job market, this program will provide you with the foundation to be successful advancing agriculture through a variety of avenues. CWI has an agreement with the University of Idaho which allows students to complete a Bachelor of Science degree in Agricultural Science Communications and Leadership. Students who complete an Agricultural Business, Leadership, and Education degree from CWI can enroll at the University of Idaho, and stay in the Treasure Valley to earn a Bachelor’s degree.

Mission

Agriculture Business, Leadership, and Education (ABLE) at CWI will foster a comprehensive understanding of, and lifelong appreciation for, the contributions of agriculture in the local, statewide, national, and global community. Our Agriculture program will empower students to meet the challenges of their individual career goals as well as enable them to be responsive to future changes in the agricultural industries.

Why This Program

An Agricultural Business, Leadership, and Education degree from the College of Western Idaho (CWI) can put you on the path to a professional position in public service or private industry as you transition to a career or a university setting. Courses will prepare students to think critically, navigate new technology, network with peers, communicate in an effective way, and gain fundamental business skills. The curriculum emphasizes a broad study of food, animal, and plant production in addition to communication and business courses. Many of the courses within this degree are available for students to take online.

What You Will Learn to Do

- Gain a robust foundation to support increasingly comprehensive knowledge in the agricultural sciences
- Become a critical thinker who utilizes scientific approaches when addressing questions regarding the production of food, feed, and fiber
- Recognize and effectively communicate the importance of the agricultural sciences as a resource for human society
